COFFEE SHOP WEBSITE — FULL PROJECT PLAN

Seven-page website strategy, structure, functionality, content, design, technology, launch, and growth plan

1. Project Overview

The website will be the coffee shop's central digital platform. Its purpose is to turn online visitors into customers by making the brand easy to discover, the menu easy to understand, the location easy to find, and ordering or contacting the business simple.

The experience should feel like an extension of the physical café: warm, modern, approachable, visual, fast, and highly usable on mobile devices.

Primary business objectives

• Increase local brand awareness and search visibility.

• Generate online takeaway and delivery orders.

• Increase physical store visits.

• Generate catering, event, and corporate-order enquiries.

• Build repeat customers through loyalty and promotional signups.

• Provide an authoritative source for menu, prices, offers, hours, and brand story.

2. Target Audience

• Local customers searching for coffee, breakfast, snacks, or a place to meet nearby.

• Students and young professionals interested in affordable drinks, Wi-Fi, and comfortable seating.

• Remote workers looking for a pleasant environment and reliable amenities.

• Families and groups interested in food, seating, and events.

• Corporate customers seeking meeting catering or bulk orders.

• New visitors discovering the café through Google, maps, social media, or recommendations.

3. Brand & Design Direction

The visual identity should communicate quality without feeling overly formal. The site should prioritize strong photography, generous spacing, clear typography, and short, scannable sections.

• Warm café-inspired visual language with a clean modern interface.

• Large photography of coffee, food, people, and the store.

• Consistent logo, typography, spacing, buttons, icons, and imagery.

• Strong contrast and accessible text sizes.

• Simple navigation with no unnecessary complexity.

• Prominent calls to action: Order Now, View Menu, Get Directions, Contact Us.

4. Seven-Page Website Architecture

Page	Purpose	Main Content	CTA
1. Home	First impression & conversion	Hero, products, story, reviews, location, offers	Order Now
2. Menu	Products & pricing	Coffee, drinks, food, bakery, seasonal items	Order
3. About	Trust & personality	Story, values, team, sourcing, philosophy	Visit Us
4. Gallery	Show the experience	Food, drinks, interior, customers, events	See Café
5. Offers & Loyalty	Repeat visits	Deals, rewards, seasonal campaigns	Join Loyalty
6. Catering & Events	Higher-value leads	Packages, events, enquiry form	Request Catering
7. Contact & Visit	Easy communication	Map, hours, phone, WhatsApp, FAQs	Directions

5. Page-by-Page Content Plan

Page 1 — Home

The homepage should answer four questions immediately: What is this business? What does it sell? Where is it? How can I order or visit?

• Hero image, headline, supporting copy, Order Now and View Menu buttons.

• Featured coffee and food cards.

• Short brand story linking to About.

• Customer reviews/testimonials.

• Current offer or seasonal promotion.

• Location preview, opening hours, and directions.

• Social media preview and footer navigation.

Page 2 — Menu

The menu should be one of the most useful pages. Products should be grouped logically with names, descriptions, prices, images where useful, and dietary/allergen information where appropriate.

• Coffee and espresso drinks.

• Tea and non-coffee beverages.

• Cold and seasonal drinks.

• Breakfast and light meals.

• Bakery and desserts.

• Add-ons, sizes, and customizations.

• Ordering buttons connected to the selected ordering system.

Page 3 — About

The About page turns the café from a generic business into a recognizable local brand.

• Founder/origin story.

• Mission and values.

• Coffee and ingredient philosophy.

• Hospitality and community approach.

• Team photographs and short profiles.

• Local partnerships or community involvement.

Page 4 — Gallery

The Gallery should sell the atmosphere visually. It should feature original photography of drinks, food, interiors, staff, customers, events, and details that communicate the café experience.

• Categories such as Coffee, Food, Interior, and Events.

• Lightbox viewing.

• Social media links.

• Short captions where useful.

• Regular updates for seasonal products and events.

Page 5 — Offers & Loyalty

This page should encourage customers to return through promotions, rewards, seasonal products, birthday benefits, referrals, and limited-time campaigns.

• Digital loyalty program or rewards explanation.

• Email/SMS/WhatsApp promotional signup where appropriate.

• First-order or launch promotion.

• Seasonal campaigns.

• Referral rewards.

• Clear promotion terms and expiry dates.

Page 6 — Catering & Events

Catering can generate larger average orders than normal café transactions. The page should explain packages and make quote requests easy.

• Corporate breakfast and coffee packages.

• Meeting and conference catering.

• Party and private-event packages.

• Bulk beverage and bakery orders.

• Custom packages for larger events.

• Enquiry form for date, guest count, budget, requirements, and contact details.

Page 7 — Contact & Visit

This page should remove every obstacle between the customer and the physical café.

• Embedded map and Get Directions button.

• Opening hours and holiday exceptions.

• Phone, WhatsApp, and email.

• Accessibility and parking information where relevant.

• FAQ covering ordering, payments, Wi-Fi, seating, reservations, and catering.

6. Functional Requirements

• Responsive mobile, tablet, and desktop design.

• Online ordering and payment integration.

• CMS for menus, prices, photos, and offers.

• Contact and catering forms with spam protection.

• Google Maps/location integration.

• Analytics and conversion tracking.

• Social media integration.

• SEO controls for titles, descriptions, headings, structured data, and image alt text.

- Fast-loading optimized images.
- HTTPS, backups, secure administration, and updates.
- Accessibility-conscious navigation and forms.

7. Customer Journeys

Discovery → **Home** → **Menu** → **Order/Visit.** A visitor arriving from Google or social media should reach relevant information within one or two interactions. Visitors not ready to order should have alternative paths such as About, Gallery, Offers, Loyalty, or Catering.

• Google → Home → Menu → Order → Checkout.

• Instagram → Gallery/Home → Menu → Directions.

• Office manager → Catering → Packages → Enquiry → Follow-up.

• Returning customer → Offers & Loyalty → Reward → Order.

8. Technology Plan

The site should use a maintainable stack that lets staff make routine updates without depending on a developer for every change.

• Frontend: responsive modern interface with reusable components and optimized images.

• CMS: editable menus, offers, gallery, news, and page content.

• Ordering: third-party ordering platform or custom workflow based on requirements.

• Analytics: traffic, menu views, order clicks, form submissions, and conversions.

• Hosting: managed hosting/CDN with HTTPS, backups, and monitoring.

9. SEO & Local Search Strategy

• Optimize for relevant coffee shop, café, breakfast, delivery, and catering searches in the actual city/neighborhood.

• Keep business name, address, phone, and hours consistent online.

• Maintain and optimize Google Business Profile.

• Use descriptive titles and meta descriptions.

• Add suitable local-business and FAQ structured data.

• Publish useful local content and seasonal announcements.

• Encourage genuine reviews and respond professionally.

10. Content & Photography Plan

Photography will be a major conversion tool. Launch content should cover the storefront, interior, hero drinks, signature food, staff, customer atmosphere, and catering setups.

• Homepage hero photography.

• Signature product images.

• Interior and seating photos.

• Team/founder photos.

• Event and catering photography.

• Seasonal campaign content.

• Consistent image sizes and compression.

11. Marketing Integration

• Social posts link directly to relevant website pages.

• QR codes on menus, receipts, packaging, tables, and signage.

• Email/WhatsApp campaigns link directly to offers or ordering.

• Paid campaigns use dedicated landing pages when useful.

• Printed materials use QR codes or short URLs for easy access.

12. Analytics & KPIs

Metric	Purpose
Website visitors	Awareness and reach
Menu views	Product interest
Order clicks	Purchase intent
Completed orders	Direct online revenue
Get Directions clicks	Intent to visit
Catering enquiries	Higher-value lead generation
Loyalty signups	Retention potential
Conversion rate	Website effectiveness

KPIs should be reviewed monthly during the first year. Findings should guide content, navigation, offers, advertising, and conversion improvements.

13. Security, Privacy & Maintenance

• HTTPS across the entire site.

• Restricted administrative access and strong authentication.

• Regular CMS, plugin, integration, and dependency updates.

• Automated backups and recovery process.

• Collect only necessary customer information.

• Appropriate privacy, cookie, terms, and ordering information for the services and jurisdiction.

• Regular review of forms and integrations.

14. Development Roadmap

Phase	Deliverables
1. Discovery	Goals, audience, sitemap, competitor review, technical requirements
2. UX & Branding	Visual direction, wireframes, navigation, mobile experience
3. Content	Copy, menu data, photography, policy content
4. Development	Seven pages, CMS, forms, ordering, maps, analytics, SEO
5. Testing	Mobile/desktop QA, forms, checkout, speed, accessibility
6. Launch	Domain, hosting, analytics, indexing, social launch, QR materials
7. Optimization	Monthly reporting, SEO, content updates, conversion improvements

15. Launch Checklist

• All seven pages complete and reviewed.

• Menu, pricing, hours, address, and contacts verified.

• Ordering/payment tested end-to-end.

• Catering form and notifications tested.

• Mobile, tablet, and desktop layouts tested.

• SEO titles, descriptions, sitemap, and indexing configured.

• Analytics and conversion events verified.

• Google Business Profile updated and linked.

• Privacy/terms/cookie requirements reviewed.

• Backups, security, domain, hosting, and admin access confirmed.

• Launch announcement and QR materials prepared.

16. Long-Term Website Strategy

The website should be treated as an ongoing business asset rather than a one-time project. After launch, the team should regularly update the menu, promotions, photos, events, and customer information. Monthly analytics reviews should identify which pages generate orders, visits, and leads.

Future expansion can include online gift cards, subscriptions, merchandise, reservations where appropriate, customer accounts, automated loyalty rewards, advanced marketing integrations, and location-specific landing pages if the business expands.

17. Success Definition

A successful website will not simply look attractive. It will make the coffee shop easier to find, easier to understand, easier to visit, easier to order from, and easier to remember. Every major design and technology decision should support those outcomes.

Planning document — final platform, pricing, integrations, legal requirements, and launch schedule should be confirmed during the discovery phase.
